Malaysia Rushes to Get OLD

Who: For the average Malaysian - anyone with parents, grandparents, or thinking about children of their own.

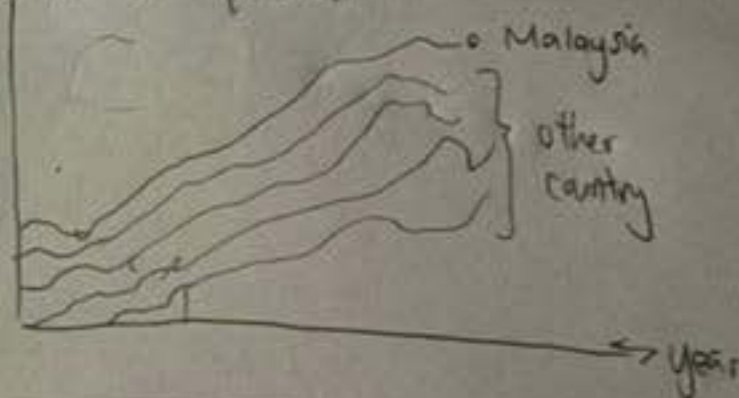

What: How Malaysia's population is ageing faster than almost any country in history.

Why: Because the change is happening in 23 years, not 100 and most Malaysians don't know it yet.

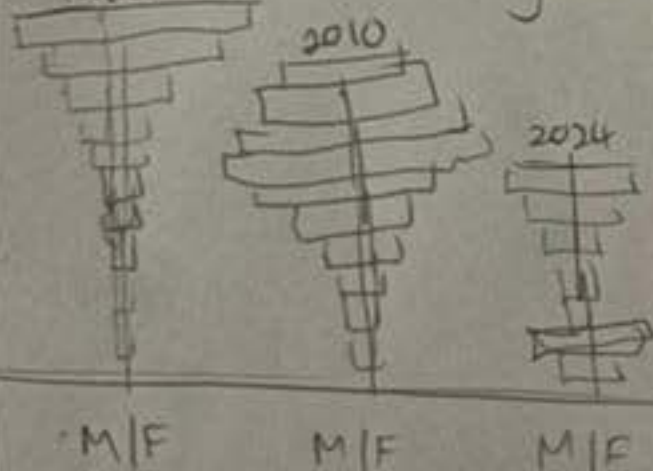

Older than half the country

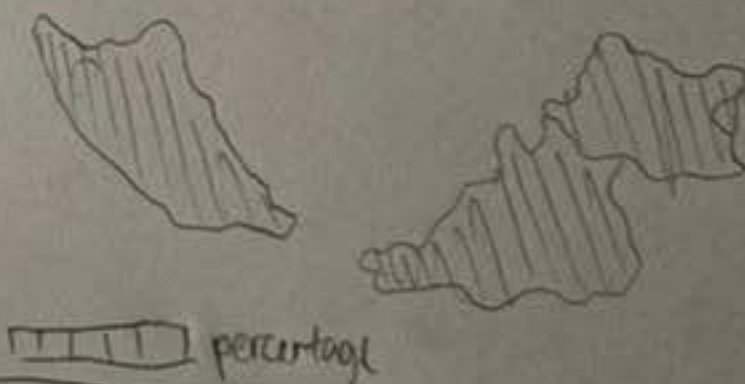

Malaysia improved alongside the world newborn live expectation

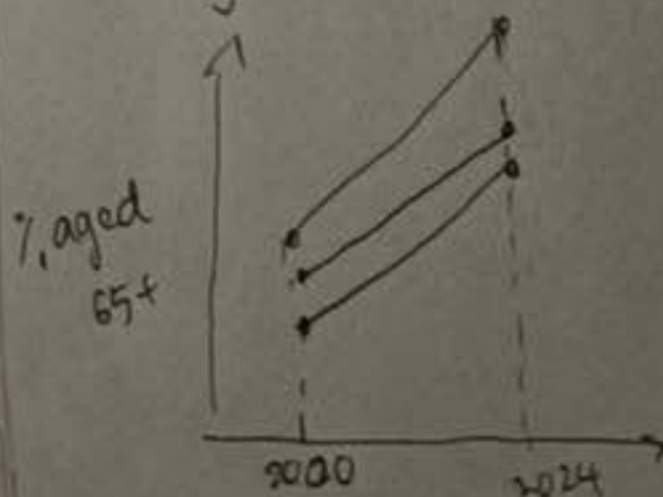

The shape of the country is changing

Note every Malaysia is ageing equally

Every state aged - at different speeds

From six children to fewer than two children per woman
